The field of informatics dynamically infuses information science and technology into the lives of people at work and play. It involves studying how people interact with computers, data and other technologies to increase productivity and enhance communication. Informatics addresses how people in various disciplines can employ computer technology with a wide range of tasks from automating mundane processes to helping people see the bigger picture at the strategic level. Students will study topics in information technology and information systems, completing their degree with an interdisciplinary emphasis such as health sciences, criminal justice, accounting, social sciences and others.
